Background Teledermatology, the application of telemedicine in the field of dermatology, has similar accuracy and reliability as physical dermatology. Teledermatology has been widely used in daily practice in the Netherlands since 2005 and is fully reimbursed.

Objectives This study prospectively investigated the effect of teledermatology on efficiency, quality and costs of care when integrated in daily practice and applied following patient selection by the general practitioner (GP).

Methods Teledermatology consultations between GP and regional dermatologist were performed in daily GP practice in the Netherlands. Efficiency of care was measured by the decrease in the number of physical referrals to the dermatologist. Quality of care was measured by the percentage of teleconsultations for second opinion, physical referrals resulting from these teleconsultations, the response time of the dermatologists and educational effect experienced by the GP. Costs of conventional healthcare without teledermatology were compared with costs with teledermatology.

Results One thousand, eight hundred and twenty GPs and 166 dermatologists performed teledermatology, and 37 207 teleconsultations performed from March 2007 to September 2010 were included. In the group of patients where the GP

Efficiëntieverbetering lange termijn

Huisarts doet na 3 jaar 40 - 60% minder teleconsulten dan in eerste jaar

Efficiëntieverbetering lange termijn

Huisarts verwijst na 3 jaar 30% minder patiënten naar ziekenhuis dan collega die geen teleconsultatie doet

Medicine 2025

In 2015 Uber, the world's largest taxi company owns no vehicles, Facebook the world's most popular media owner creates no content, Alibaba, the most valuable retailer has no inventory and Airbnb the world's largest accommodation provider owns no real estate.

**“The best way to find out if
you can trust somebody is to
trust them”**
